

Additional file 4

Fully labelled supplementary heatmaps

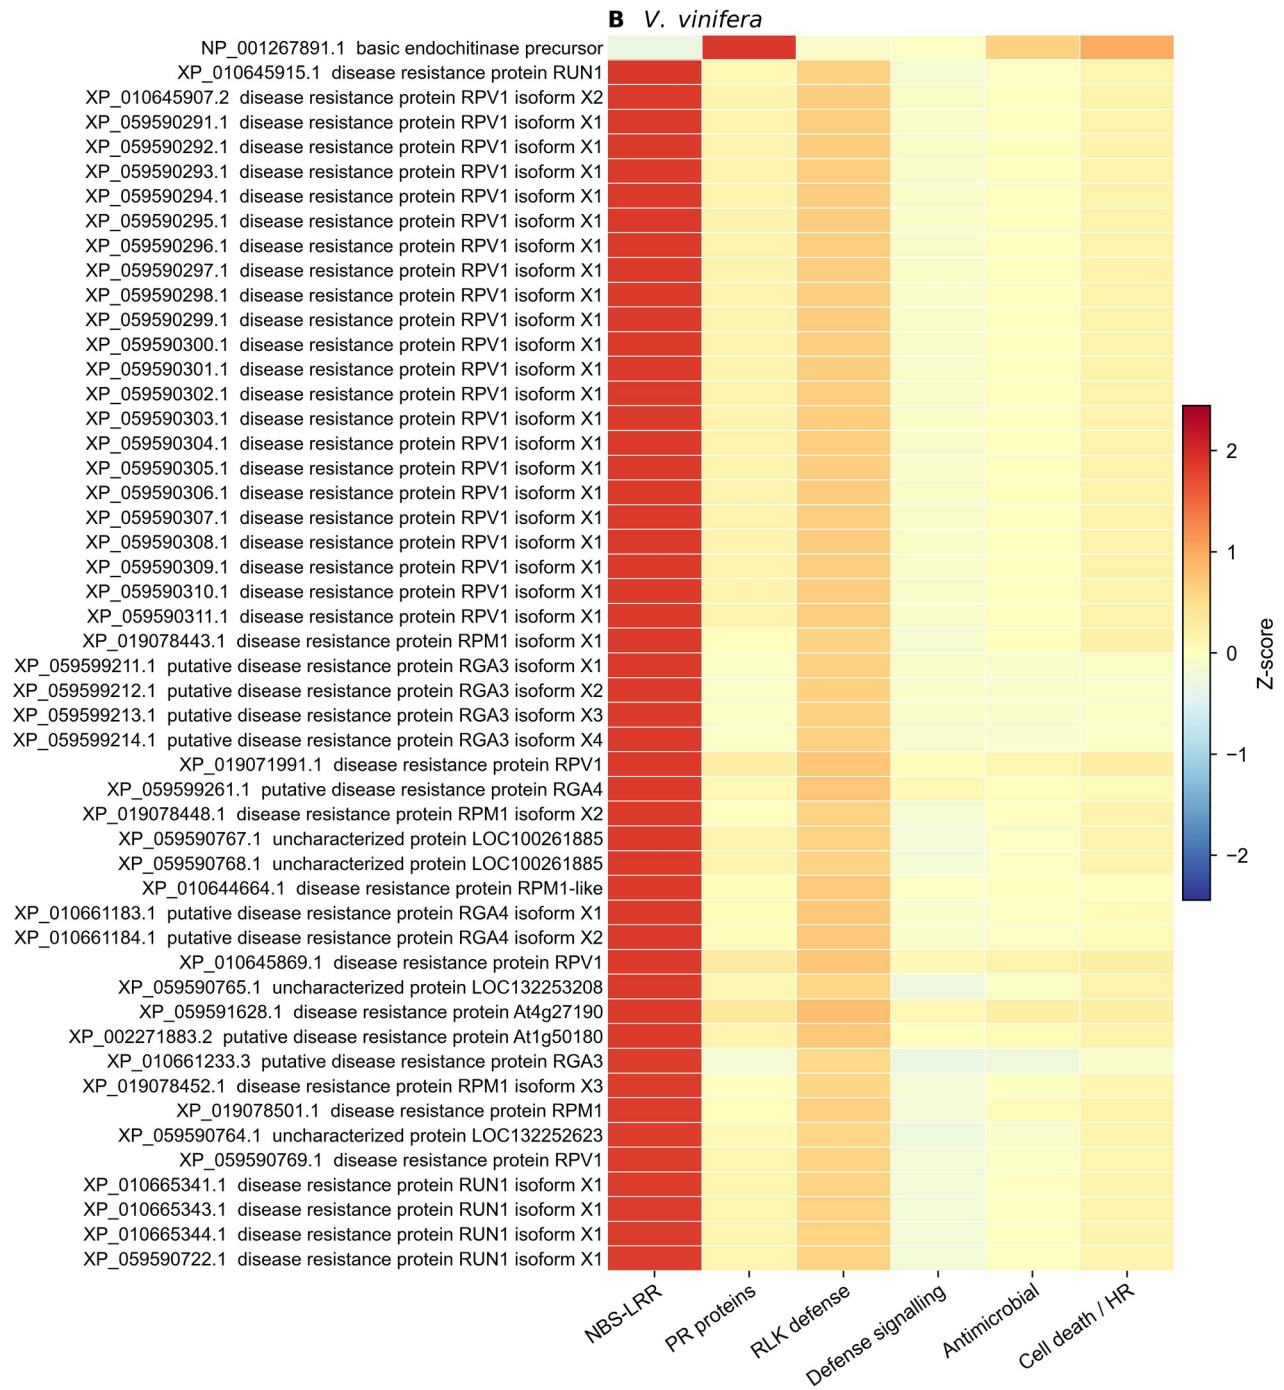

Complete, fully labelled versions of the two heatmap figures in the main text. Part 1 corresponds to Figure 3 and shows the top 50 defense candidates in each species ranked by maximum Z-score. Part 2 corresponds to Figure 4 and shows the six highest-scoring candidates with distinct RefSeq descriptions within each of the six defense categories (near-identical isoforms collapsed), with horizontal rules separating the category blocks and asterisks marking candidates whose RefSeq description contains no defense-associated keyword. In both parts, columns are the six defense categories and colour intensity indicates the Z-score of each protein against each category centroid on a single scale, shared by all panels and centred on zero. (A) *Arabidopsis thaliana*, (B) *Vitis vinifera*, (C) *Oryza sativa*.

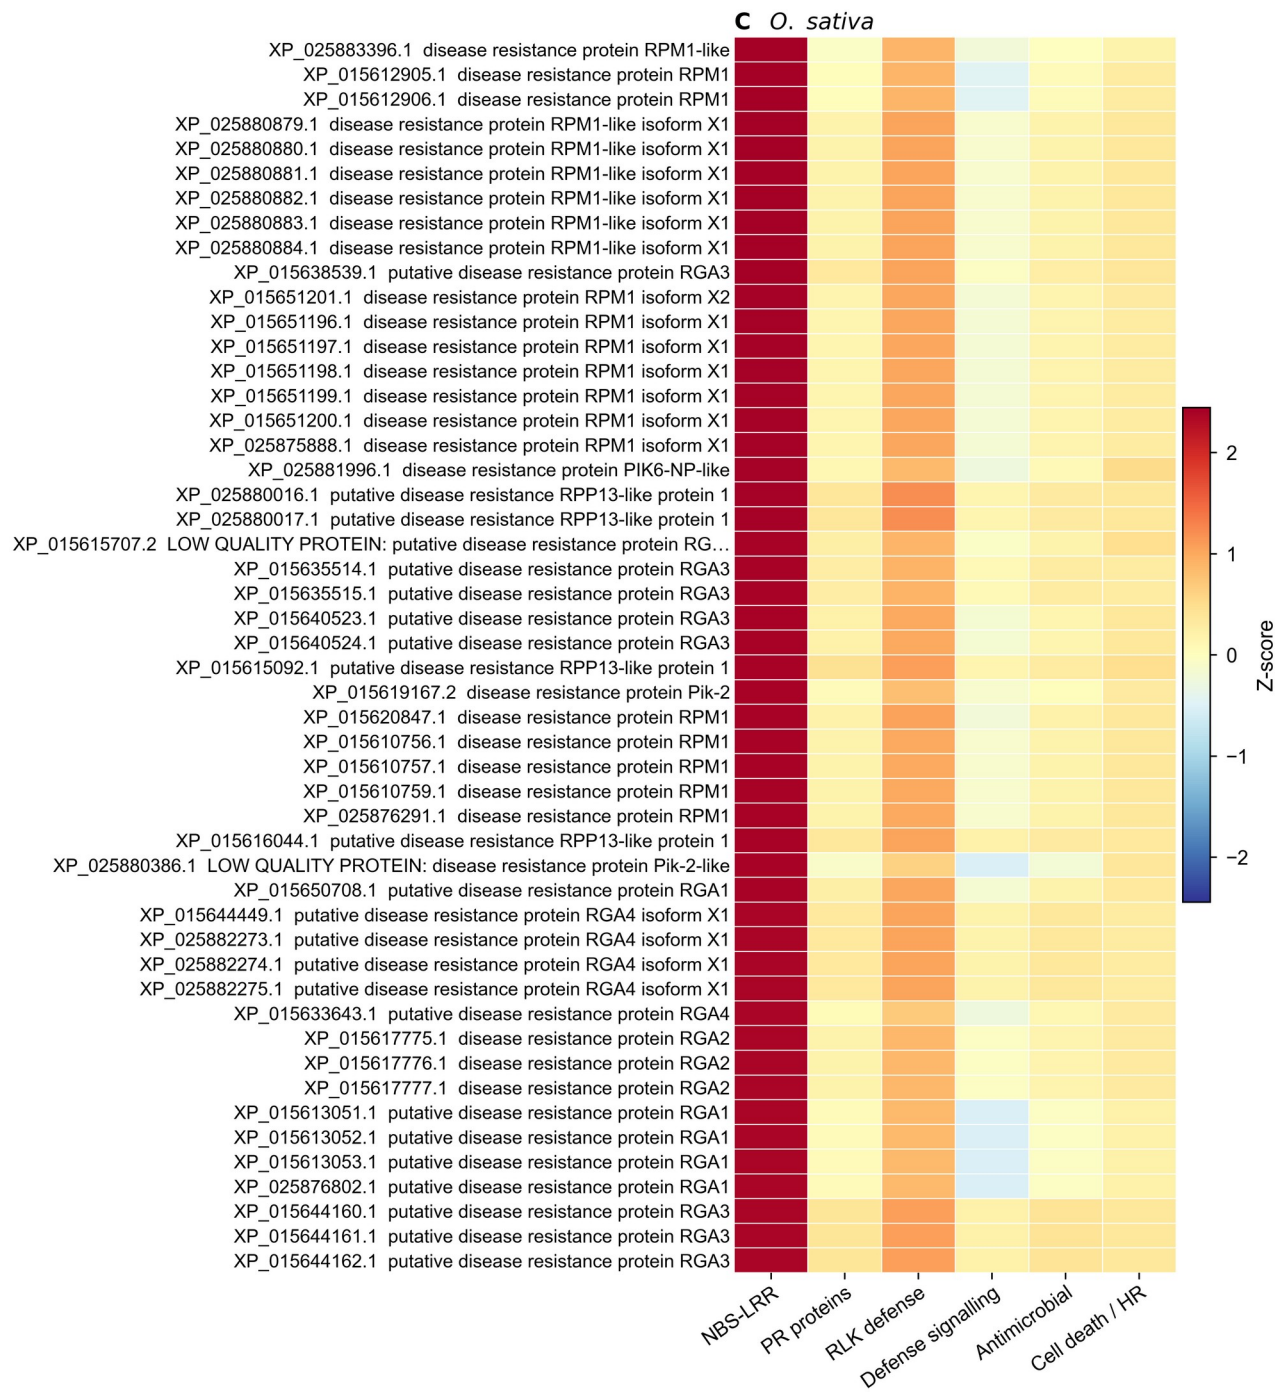

Part 1. Category heatmaps, top 50 candidates per species (Figure 3)

A *Arabidopsis thaliana*

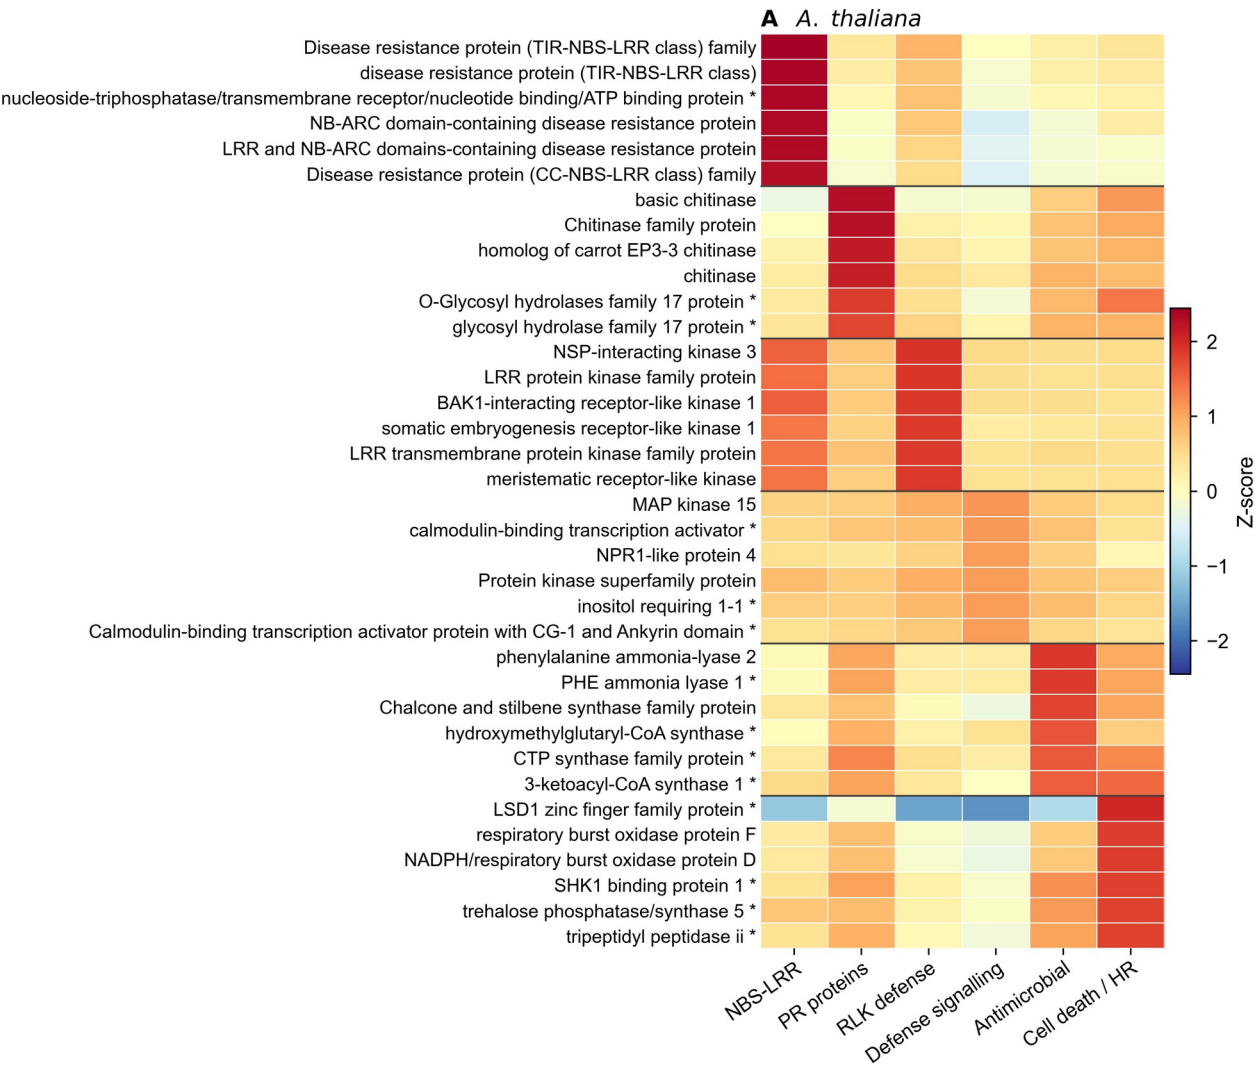

B *Vitis vinifera*

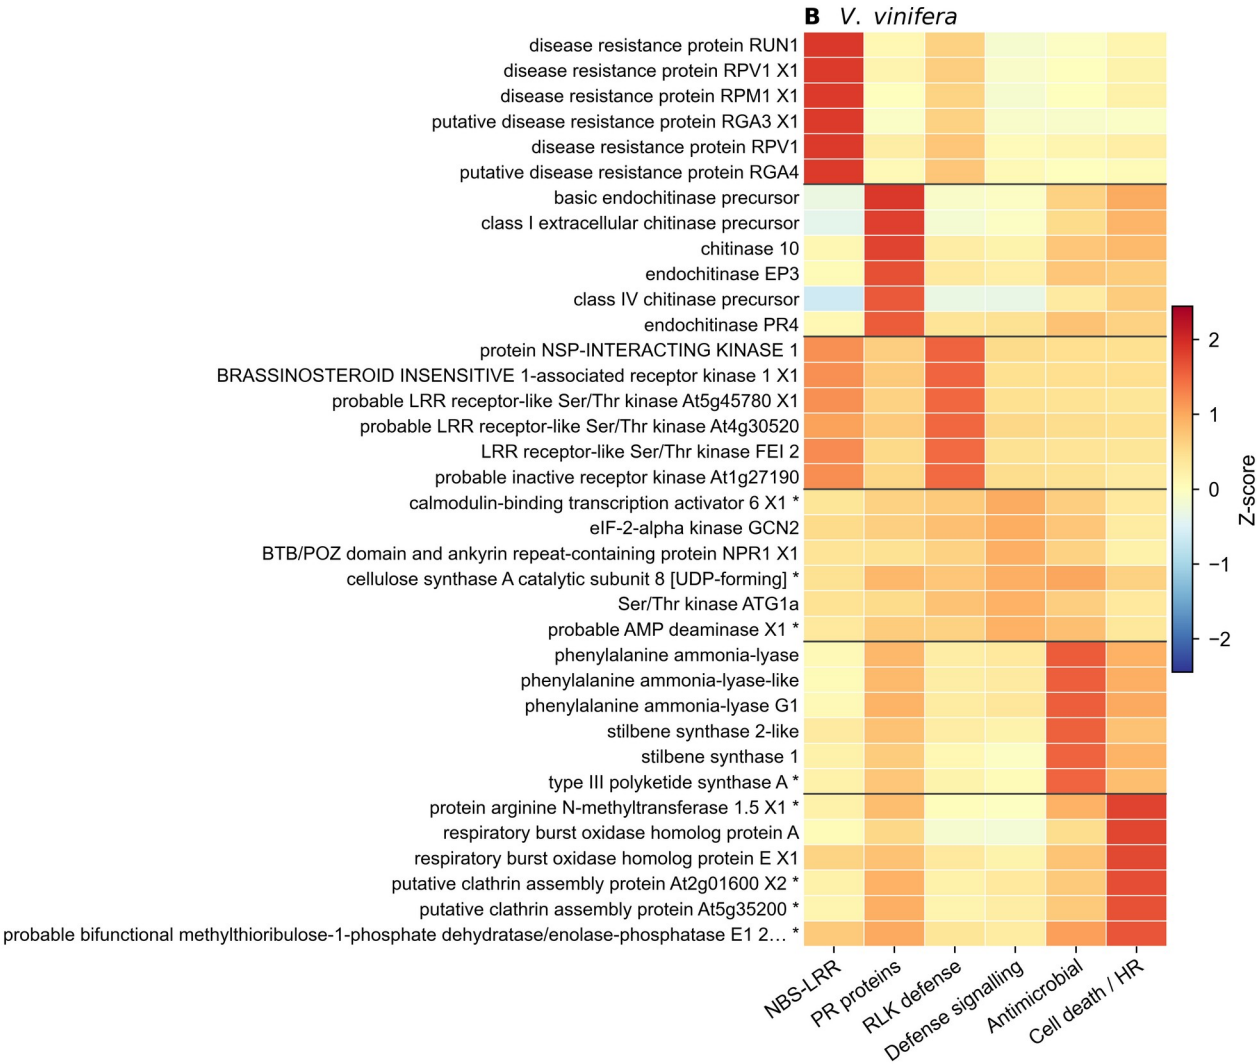

Part 2. Per-category candidates, six per category per species (Figure 4)

A *Arabidopsis thaliana*

B *Vitis vinifera*

C *Oryza sativa*
